

SUGGESTED SEALERS FOR POOL COPING

CONSOLIDATE - Stone strengthener is most commonly used if a 'DIP SEALING' system is required for the likes of sandstone and limestone. When using this system allow 24 hours after sealing before fixing with a suitable adhesive. **CONSOLIDATE** will reduce the moisture uptake and strengthen the substrate, reducing freeze thaw and dusting.

Refer: CSIRO testing as per AS/NZ 4456:10-2003A

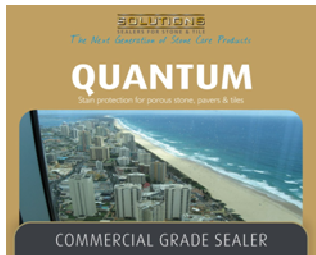

SILCOPEL - Water repellent is most commonly used if stone had already been 'fixed'.

SILCOPEL is a great water repellent reducing moisture uptake by up to 95% and is a great pre-sealer before grouting on porous surfaces but is also a great sealer for keeping sandstone and limestone free from mould growth, efflorescence and dusting. For protection against oil based stains, seal with either **PRISTINE** or **QUANTUM**.

PRISTINE - Natural sealer is a general purpose stain resistant sealer. **PRISTINE** is a good general purpose stain resistant sealer that is effective on a variety of different surfaces and can also be used as a pre-sealer before grouting. **PRISTINE** is a great 'SAME DAY' sealer that retains the 'natural' look of the substrate and allows the surface to 'breathe' unlike standard acrylic sealers.

QUANTUM- Commercial grade sealer is a professional grade penetrating sealer with a high solids content to reduce the ability of staining on porous surfaces. **QUANTUM** is designed for granite, sandstone, limestone and concrete pavers where increased stain protection is required. **QUANTUM** reduces moisture uptake by up to 95% and allows the surface to 'breathe' with minimal change to appearance of the surface.

Product Information

TECH TIP:

KEEP WATER LEVEL @150mm BELOW COPING TILE .
